# icom Connectivity Suite VPN

Transparent Remote Access  
to Machines and Plants

# icom Connectivity Suite

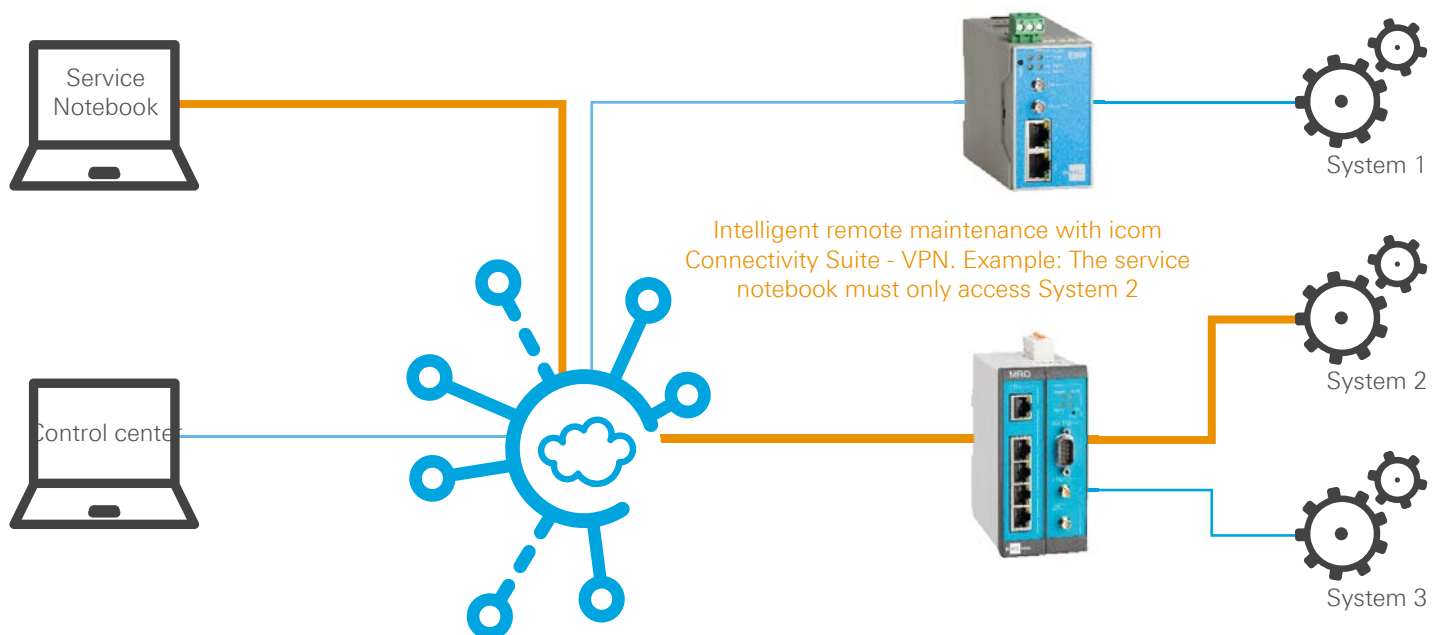

## VPN

Secure connections are the basis of modern data communication. The protection of field devices was no issue in times of SMS-based failure reporting. Industry 4.0 and the Internet of Things require that a multitude of devices are always online, communicate with each other and operate autonomously. This multi-directional communication in wider growing networks must be protected and managed.

INSYS icom offers a managed service with the icom Connectivity Suite - VPN that provides communication for OpenVPN-capable routers, PCs and other devices in a secure VPN environment. Integration and management of the devices is very simple: Configuration files and certificates are generat-

ed by the service and automatically uploaded to routers of INSYS icom thanks to their quick start wizard.

Group formation, connection control, network monitoring and Firewall-in-tunnel are just a few highlights that make the icom Connectivity Suite - VPN to much more than a simple VPN service. And now the best: You need neither an own infrastructure nor IT experts. Create your own VPN, quick and easy with INSYS icom.

### Installation options:

#### As a Service

- VPN in 5 minutes
- Complete hosting in German, ISO 27001-certified data center by INSYS icom
- Highest availability
- All-round carefree package

#### OnPremise light

- Hosting of the GUI in German, ISO 27001-certified data center by INSYS icom
- Hosting of the VPN instances by the customer for full data traffic control and location-optimised latency times

#### OnPremise

- Complete hosting by the customer for fulfilling maximum data protection requirements and restrictive IT policies

## Top Benefit!

### 2 licences permanently free!

Unlimited number of devices, not bound to the purchase of further licences, all functions included.

4 weeks | 4 licences

### TEST FREE OF CHARGE AND WITHOUT ANY OBLIGATIONS

Test the icom Connectivity Suite - VPN for four weeks with four licenses without any obligation and free of charge. The test period ends automatically. Two licences can be used permanently for free afterwards.

## Function overview:

### Device Management

Integrating, managing and deleting routers and other OpenVPN-capable devices, status information.

### Group Management

Assigning devices to groups incl. connection control within and between groups.

### Advanced Group Management

Restricting connections to protocols, devices or ports.

### Configuration and Certificate Handling

Creating configuration files and certificates including automated certificate updates.

### Network Monitoring

Monitoring the availability of individual routers integrated in the VPN network and downstream devices and applications.

### Web Proxy

Read or write access to http-based user interfaces within the VPNs by devices that are not part of the VPN itself.

### SIM Management

Managing INSYS icom Premium M2M SIM cards and plans.

### Log Files

Logging all actions within the VPN and providing them for download.

### Quick Start for INSYS Smart Devices

Quick start, automatic integration and certificate transmission.

## Two variants. Your choice:

	VPN Flex	VPN Enterprise
OpenVPN	X	X
Monitoring	X	X
Web proxy	X	X
Groups	X	X
Log files	X	X
Unlimited parallel connections	X	X
SIM management	X	X
2 free licences	X	X
1 GB / licence / month	X	X
Flexible pooling	X	X
OEM edition	-	optional
Multi-tenant capability for managing own clients	-	X
Enterprise licence package (100 licences)	-	X
Complete data traffic via customer IT (OnPremise light)	optional	optional
Customer installation (OnPremise)	-	optional

INSYS icom is proven technology partner in professional data communication for M2M (Machine to Machine) and IoT (Internet of Things) since 1992. The product portfolio allows customers to connect their applications where and when ever this is necessary – reliable, user-friendly and secure.

INSYS icom offers all necessary components like modems, routers, connectivity, SIM and VPN services as well as apps for this to connect to control centers, clouds, web services and other destinations. Besides these standard products, INSYS icom is an experienced partner for customer-specific projects.

The complete knowledge for hardware, software and applications is in-house, accompanied by a professional support team and close partnerships with leading technology, service and sales partners.
